

README

- We offer some test datas in the `test.py` in the `blueprints` in code file. User can use that for the test.
- We also offer two ways to set up the database, if you want to use the local database just make sure the local database service start.
 - If want online mongodb, should find `app.py` in the `Code`

```
21 #---
22 # mongo db cloud
23 # import pymongo
24 # from pymongo.server_api import ServerApi
25 #
26 # client = pymongo.MongoClient("mongodb+srv://localhost:27017123456@cluster0.dx6ki
27 # db = client['Project6']
28 #----
```

you will use these code instead of

```
21 #---
22 # mongo db cloud
23 # import pymongo
24 # from pymongo.server_api import ServerApi
25 #
26 # client = pymongo.MongoClient("mongodb+srv://localhost:27017123456@cluster0.dx6ki
27 # db = client['Project6']
28 #----
```

- We just set default is using local database.
